

SAHIL POWER SYSTEMS

AN EQUIPMENT RENTAL COMPANY

Exceeding Customer Expectations

About the Company

The rental leader and a one-stop destination specializing in DG Set, Cradle, Cranes, and other construction based machines; Sahil Power Systems is one of the most professionally managed service provider, facilitating the rental services all over the nation. With a humble beginning from a small rental shop in 1980, the unbeatable advantages, product support, and the exceptional overall services have helped us in thriving to the leadership position. Now we boast of 1000+ DG sets along with other equipment that serves a host of segments like Real Estate Development, Automobile & Mobility Sector, Mining sector etc. with an assurance of quality, safety, and standard technical support. Fuel services and distribution panel is also taken care of here.

We have an unmatched range of young fleet of equipment with an average age of 4-5 years that ensure the maximum efficiency and reduce the chances of breakdowns. With better fuel efficiency and lesser pollution we ensure the sustainable development by putting lesser load on environment.

Our Team

Being headquartered at New Delhi, our strongly coherent team members are spread all over India. Our highly motivated team with an attitude of never giving up is always ready to face the new challenges and strive hard to deliver the exceptional customer experience. We ensure constructive communication between teammates & are always open for discussions and innovations. The special technicians work round the clock to serve the clients.

Mission

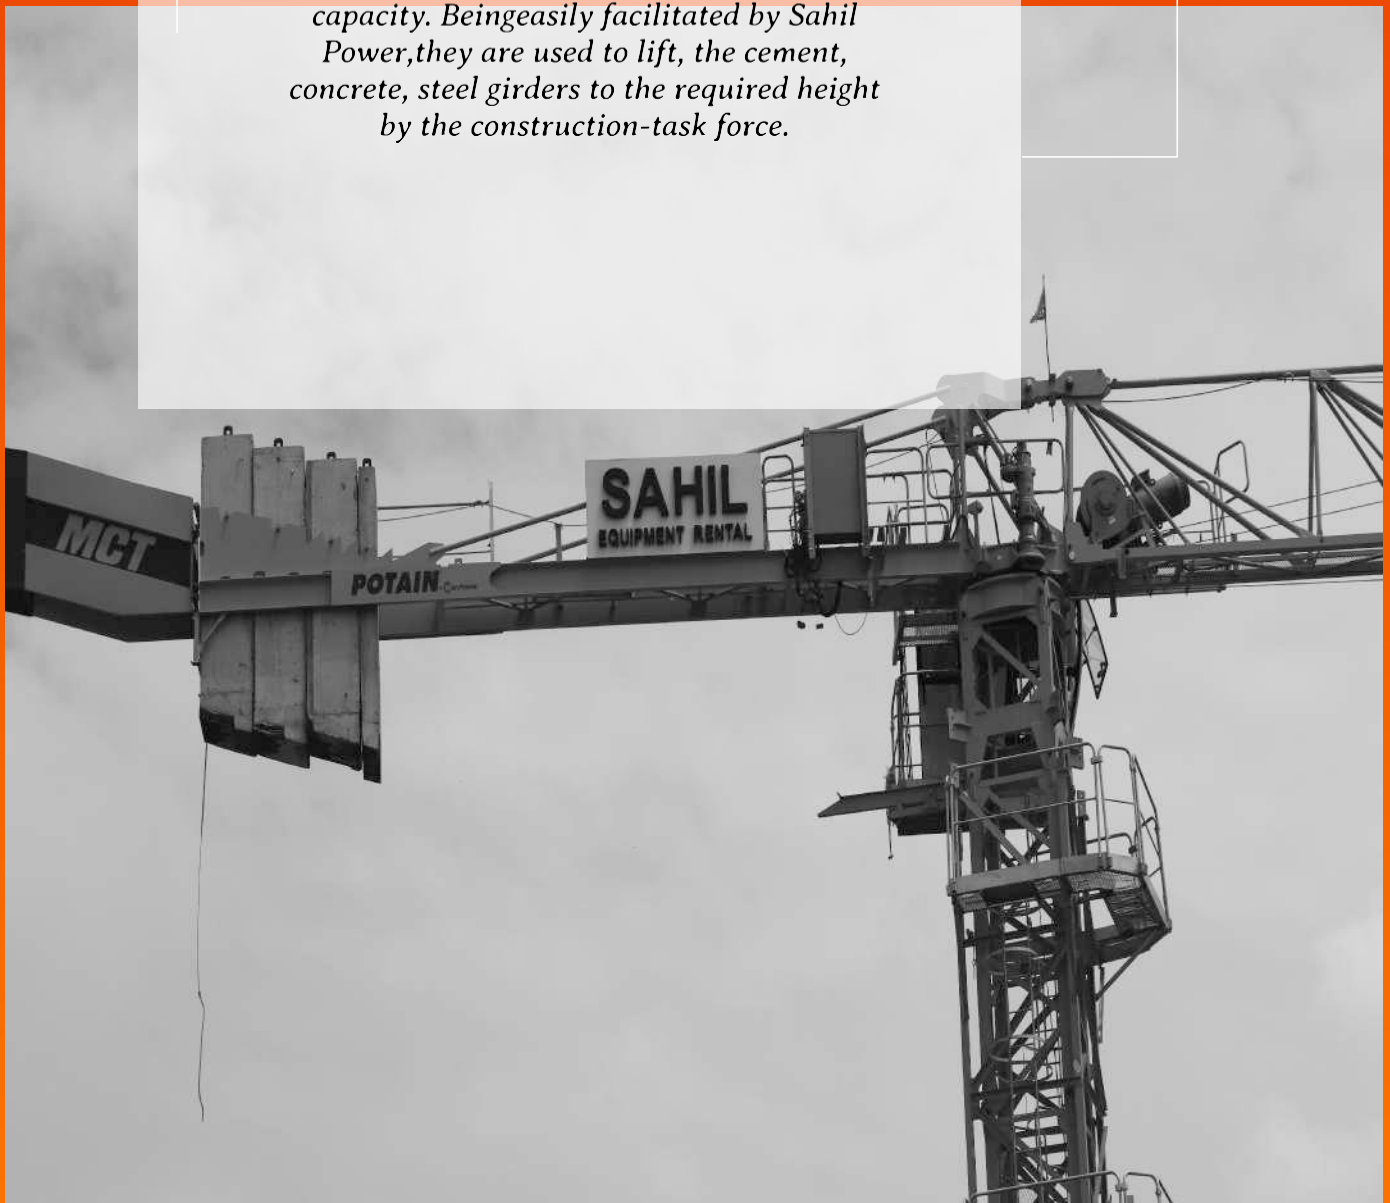

To innovate the mobility solutions with a passion to enhance the quality of life and motivating people to act like owners working together.

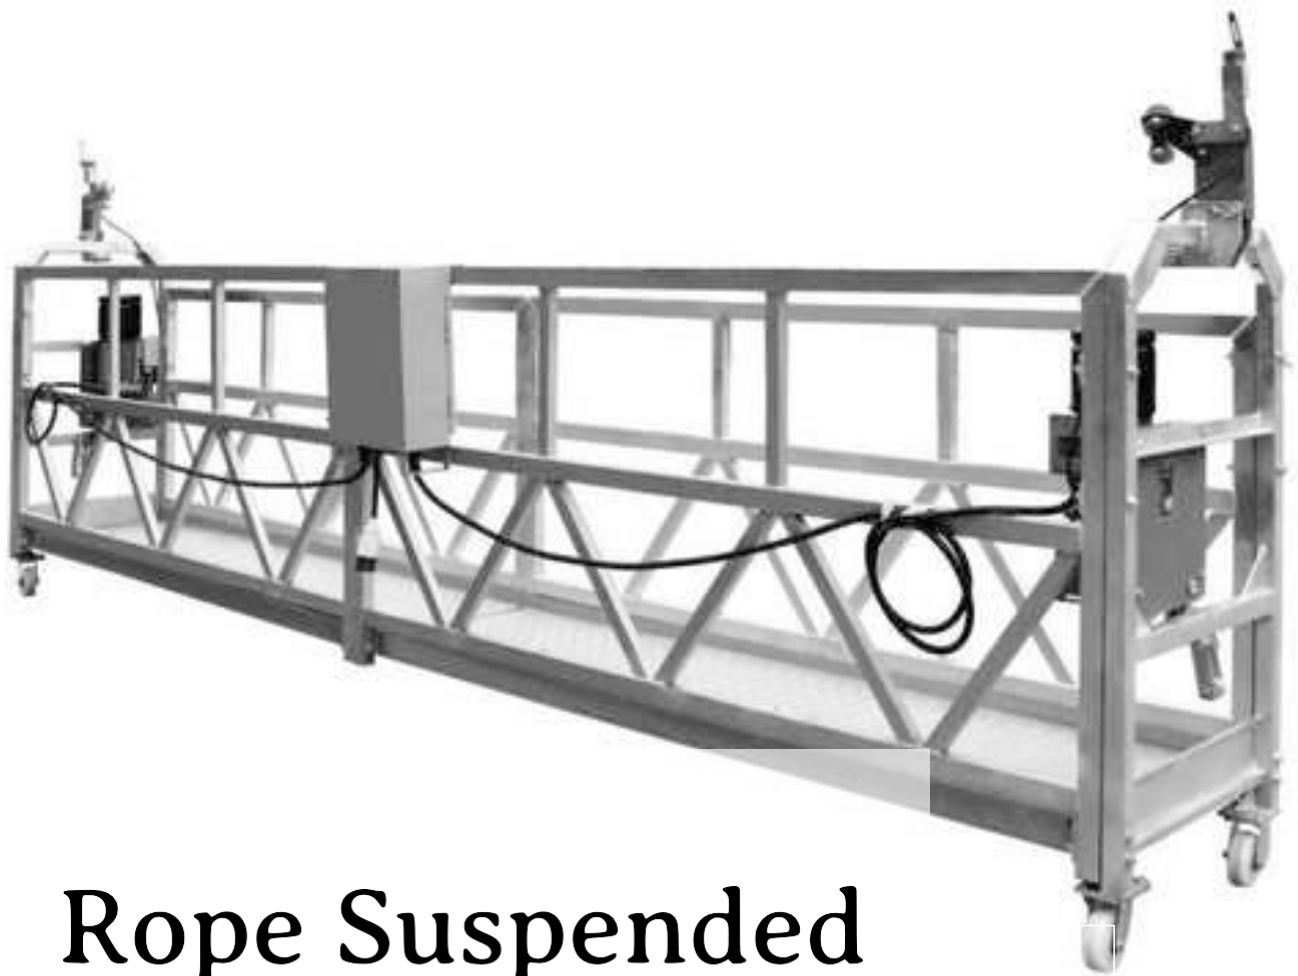

Vision

To provide the most optimized & personalized solution with the equipment on rent for the people in the emergency need.

Tower Crane

Tower Cranes- the most common fixtures at large construction sites, outperform the loading and lifting capacity of other types of cranes, and also have the unparalleled height capacity. Being easily facilitated by Sahil Power, they are used to lift, the cement, concrete, steel girders to the required height by the construction-task force.

Rope Suspended Platform

Rope Suspended Platform is one of the most widely used technologies deployed in various processes because of the higher safety. The conventional scaffolds are temporary and require to be created in different ways for different purposes. Countering this glitch, RSP proves to be the safer and easy to use alternative and for the purpose. RSPs are now widely being used for outer wall construction and in cleaning of building exteriors, facade and outer glasses.

Steel cutting and Bending Machines

The highly efficient machines to give steel rods and pipes the desired shape and size are also facilitated by Sahil Power Systems. Apart from reducing the required manpower to a great extent, high accuracy & enhanced productivity are the other attributes. These machines lead to zero wastage that result in huge savings to the customers.

Diesel Generator Sets

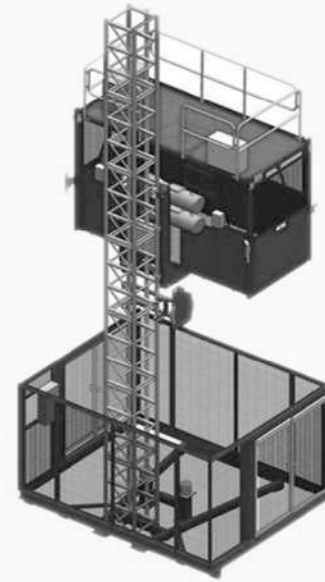

We have an unmatched range of highly efficient DG sets with power ranging from 7.5 to 3000 KVA with an average age of 3-4 years only. With the guaranteed uptime, committed delivery, superior fuel consumption, we power the nation for the seamless operations.

DG set is the most reliable source of back power in case of emergency, across the world.

With such a wide range, we are able to rent the DG sets to different sections of the society, serving them in the purpose they want.

Hoist

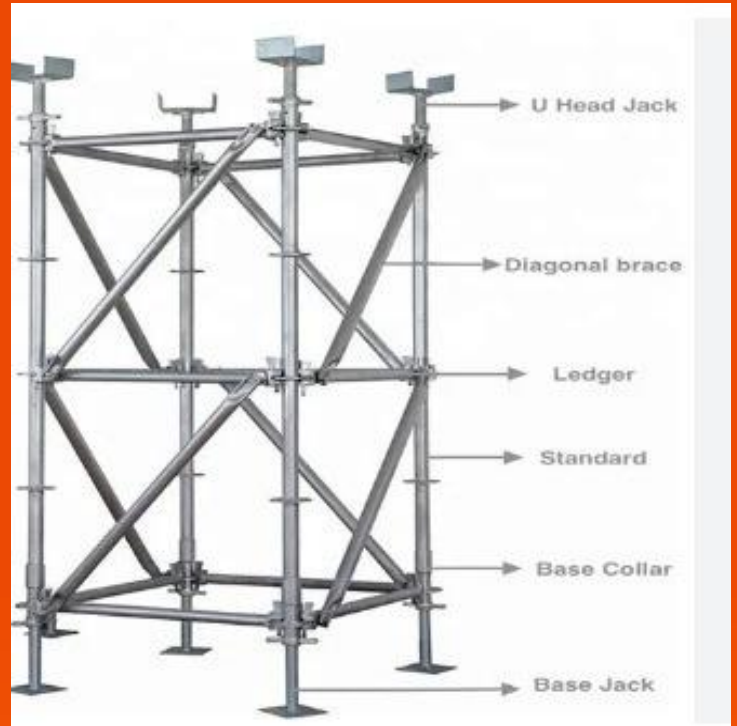

Also known by other names like temporary elevator, construction elevator, hoist is commonly used on large scale construction projects, mainly high-rise buildings. Sahil Power offers a superior range of rack and pinion hoists in compliance with the international safety standards. Our wide range of hoists has load carrying capacity from 500 to 3000 Kg.

Scissor Lift

Scissor lifts can handle any operation requiring a ladder, tower, or scaffolding; and complete the same job fast with greater ease and safety.

CUPLOCK SCAFFOLDING

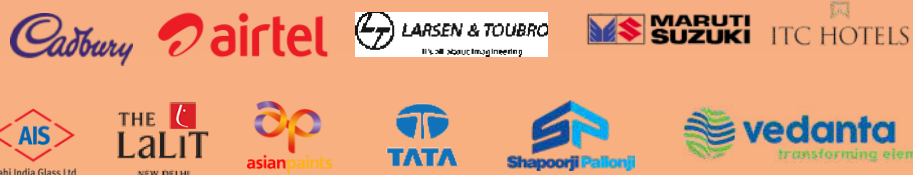

WHAT ARE THE ADVANTAGES OF CHOOSING CUPLOCK SCAFFOLDING

- **Versatility and Flexibility**
- **No bolts and Welding required**
- **Stability**
- **Standardization**
- **Repetitive Utilization**
- **Low-Maintenance**
- **Easy to Transport**
- **Reduces Manual Efforts**
- **Safety**
- **Required less Storage Space**

To name a few, Sahil Power Systems is proud partner for the following firms of the national and international repute.
